Educational leaders are seeing with increasing clearness the necessity of teaching students not only the subject-matter of study but also methods of study. Teachers are beginning to see that students waste a vast amount of time and form many harmful habits because they do not know how to use their minds. The recognition of this condition is taking the form of the movement toward "supervised study," which attempts to acquaint the student with principles of economy and directness in using his mind. It is generally agreed that there are certain "tricks" which make for mental efficiency, consisting of methods of apperceiving facts, methods of review, devices for arranging work. Some are the fruits of psychological experimentation; others are derived from experience. Many of them can be imparted by instruction, and it is for the purpose of systematizing these and making them available for students that this book is prepared. The evils of unintelligent and unsupervised study are evident to all who have any connection with modern education. They pervade the entire educational structure from kindergarten through college. In college they are especially apparent in the case of freshmen, who, in addition to the numerous difficulties incident to entrance into the college world, suffer peculiarly because they do not know how to attack the difficult subjects of the curriculum. In recognition of these conditions, special attention is given at The University of Chicago toward supervision of study. All freshmen in the School of Commerce and Administration of the University are given a course in Methods of Study, in which practical discussions and demonstrations are given regarding the ways of studying the freshman subjects. In addition to the group-work, cases presenting special features are given individual attention, for it must be admitted that while certain difficulties are common to all students, there are individual cases that present peculiar phases and these can be served only by personal consultations. These personal consultations are expensive both in time and patience, for it frequently happens that the mental habits of a student must be thoroughly reconstructed, and this requires much time and attention, but the results well repay the effort. A valuable accessory to such individual supervision over students has been found in the use of psychological tests which have been described by the author in a monograph entitled, "The Scientific Study of the College Student."

There's no one to tell you that you're creating incorrect color combinations. If there's one thing that you're doing wrong, it could be your grip and the amount of control you exhibit. But that's fine because as you continue to work on your coloring skills, your fine motor and handwriting skills will improve as well. Color today!

Teachers, especially those in nursery and pre-primary schools, know that it takes specialized learning aids to help children learn how to identify objects, develop eye-hand and fine motor coordination, improve attention span, and learn to focus on the activity in which they are participating. The aim of BEE CLEVER Activity Books Keeping these important learning factors in mind, a pre-school educator and counsellor has created a series of simple and stimulating activity books. These help develop the skills a child needs, plus contribute to the further development of the child's 'writing readiness'. Pallavi Dalal - the creator of BEE CLEVER Activity Books - has spent over 25 years working with pre-school children. She says, "There has been much thought, care, understanding, laughter and joy that has gone into creating these books. I can only hope that they will bring children many 'magical moments' of learning, and spending time with each other in a happy and relaxed frame of mind." Two Important Factors While planning any activity for children, two important principles of learning are always uppermost in her mind: 1. "I see and I remember." 2. "I do and I understand." She has designed these books to develop differentiating and logical thinking skills in children and evaluate their interests in certain areas, without making them feel like they are being 'tested'! How BEE CLEVER books are DIFFERENT - Objects illustrated are those a child is generally familiar with. - Instructions can be read to a child without having to simplify them. - Illustrations are bold and clear for the child to see and work comfortably. - Accurate use of grammar, punctuation and spelling. - Each book in the series explains the value of doing that specific activity. - Simple 'Do's and Don'ts' create a 'win-win' situation for the child. BEE CLEVER SERIES: - Colouring 1 - Colouring 2 - Join the Dots 1 - Join the Dots 2 - Matching - Mazes 1 - Mazes 2 - Numbers 1 - Numbers 2 - Odd One Out - Opposites 1 - Opposites 2 - Pattern & Letter Writing 1 - Pattern & Letter Writing 2 - Phonics 1 - Phonics 2 - Shapes 1 - Shapes 2 - Story Sequence - What's Different? - What's Next? - What's Wrong?
