The electrostatic precipitator is suitable for collecting large particulate matter, and the fabric filter is suitable for collecting fine particles. In the ESP-FF, most of the fly ash in the flue gas is collected in the electric field, and then the remaining fine particulate matter is collected by the fabric filter.

This is an example of application to exhaust gas processing from a pulverized coal-fired boiler. We reduced the size of the fabric filter by increasing the filter bag length to 9 m (normal length is 6.0 m or 6.9 m). Using a long filter bag for a large quantity of process gas made it possible to reduce the size of the device.

The wastewater then flows through the filter fabric from the inside to the outside of the drum. Solids that are too large to pass through the filter fabric are removed from the fabric by a mechanism at the highest part of the rotating drum. These collected solids flow via a trough to a collection tank.

Faculty Workshop on Environmental Management, that was conducted at Utah State University in July and August 1996. The principle objectives of the seminar were (1) to provide a meaningful course which would generate new ideas and innovative educational approaches in the emerging field of environmental management, and (2) to develop an applications-oriented problem workbook which would support undergraduate faculty involvement in the production of course materials. The result of this effort is *Environmental Management: Problems and Solutions*, an informative text on the

essentials of environmental management. More than 200 structured problems presented in the book are meant to elicit a sound understanding of the basics of environmental monitoring, assessment and control. Detailed solutions to each problem, provided with each chapter, will prove useful to both the student and the instructor. This innovative text is a valuable resource for anyone involved in training of engineers and scientists in the field of environmental engineering.

membrane filtration. It also explores the complex interaction among key design and operating parameters, offers comprehensive explanations on the interconnectivity between biological and membrane systems, and covers new findings discovered in recent years. This book clearly explains how small-scale systems perform differently from larger-scale systems and its implications in data interpretation. Using this book as a platform, the technology can be developed further and quickly applied in future processes.
